AESTHETICS

## Nano Infusion Protocol

---

Perform a full consultation with your client. Find out what their goals are with these treatments, their main concerns or areas of concern. Make sure they understand that they need to do a series of treatments for optimal results and that home care is a big factor in the outcome of their treatments.

### Pre-treatment:

---

1. Double cleanse the skin, followed by a skin antiseptic (hypochlorous acid, witch hazel, or alcohol).
2. Take before pictures in good lighting with a solid background like a wall or door. Take photos from the front, both side profiles and quarter view.
3. Wash your hands and put on disposable gloves.

### BioRePeelCl<sub>3</sub> Preparation:

---

1. Shake the **BioRePeelCl<sub>3</sub> Blue** vial for a few seconds until the color changes to a thick green liquid. This now means the product has been activated.
2. Pull the desired quantity of product with an 16 or 18G cannula without removing the butyl stopper but piercing it with the cannula. During long nano infusion sessions **BioRePeelCl<sub>3</sub> Blue** tends to separate inside the syringe. In this case the syringe has to be shaken to re-activate. make sure to check that the product has not begun to separate.

\*Microchanneling and nano infusion service protocols and approval may vary by state. Please check with your local state board to ensure your chosen modality is within the scope of practice for your licensing type before performing the treatment.

## Nano Infusion:

4. Open the sterile **nano stamp cartridge** and attach it to your wrapped **NanoStamp 360™ device**.
5. Apply the first layer of **BioRePeelCl<sub>3</sub> Blue** to a small area (2"x2" - 3"x3").
6. Perform nano infusion over without putting any pressure. Let the tip glide over the skin, small back and forth movements both horizontally and vertically.
7. Apply the second layer of **BioRePeelCl<sub>3</sub> Blue** by massaging.
8. Leave the peel on (*see technical details for timing*).
9. Completely remove **BioRePeelCl<sub>3</sub> Blue** from the treated area using esthetic wipes/gauze and water.
10. Finish by applying **Universal Hydra Moisturizer (UHM)** and SPF.

## Post-treatment:

3. Remove the tip and place in a sharps container.
4. **Universal Hydra Moisturizer (UHM)** should be used 3x a day for 7 days.
5. **Pigment Corrector Gel (PCG)** may be used immediately post-procedure before applying **Universal Hydra Moisturizer (UHM)**.

## Technical details:

FND	Product Volume (mL)	Down time
Face	1	5-7 minutes
Neck	0.5	5-7 minutes
Dècolletè	1	5-7 minutes

\*BioRePeelCl<sub>3</sub> Blue in association with microchanneling has to be applied every 7-10 days for 4-5 sessions.
